Identifying the trees

On the farm, there is an orchard. In this orchard, we observed the leaves in the trees to identify which tree it was.

There are 8 rows of trees. There are between 20 to 25 trees by row.

Our objective was to compare the trees by observing the leaves.

There were several varieties of trees like apple trees, plum trees, pear trees and hazelnut trees.

We checked if they were alive or dead.

We wrote the type of tree on labels of different colours and we put the labels on the trees.
